

PondMate Product Range

PondMate Pumps

Pond Pumps • Bio Filtration Pond Accessories • Water Garden Lighting

The PondMate range has been consistently recognised for reliability and value for money over the past 15 years. With one of the most comprehensive aquatic offerings in the market, PondMate also provide a range of water accessories to enhance your outdoor living experience.

Whether you are running a small water feature or a large pond, PondMate has the perfect product to suit your application.

All of our pumps carry a 2 Year 'no fuss' warranty to allow home owners peace-ofmind.

PondMate Pumps Quick Selection Guide

| | Power Consumption (W) | Max Flow (L/min) | Max Head (m) | Outlet (mm) | Cable (m) | Pre-Filter | Flow Control | Suitable for above ground install |

3

Fountain Pumps

Featuring a powerful and energy efficient rotor, this durable pond pump offers longer operating life and is suitable for both fresh and marine water. Can be used in aquarium, water garden fountain and waterfall applications.

FP Series

Advantages:

- Durable construction
- Energy efficient
- Optional in-line use
- Encapsulated epoxy resin motor ensures safefy, reliability and durability
- Easy installation
- Comes with 10m cable & flow adjuster
- Suitable for non-submersible and salt water
- Each unit individually wet-tested to guarantee reliable operation

Construction:

- Wear-resistant ceramic shaft ensures long life
- More powerful and energy-efficient magnetic rotor
- Thermal protector
- Encapsulated epoxy resin motor ensures safety, reliability and durability

Complete pump kit with fountain heads. Please Note: Fountain kits will vary depending upon pump models.

A low voltage, energy efficient pump with flow adjuster, the PLV Series is suitable for both fresh and marine water. Can be used in aquarium, water garden fountain and waterfall applications.

Advantages:

- Durable construction
- Features flow control adjuster
- Energy efficient
- Optional in-line use (For models PM700PLV and above only)
- Easy installation
- Comes with 5m cable
- Suitable for salt water applications
- Each unit individually wet-tested to guarantee reliable operation

Construction:

- Wear-resistant ceramic shaft ensures long life
- More powerful and energy-efficient magnetic rotor
- Weather-proof transformer
- Encapsulated epoxy resin motor ensures safety, reliability and durability

Comes with Low Voltage transformer.

Circulation Pumps Series

NDMATE >

The PondMate Circulation Pump offers an extensive range, with the ideal pump for the smallest water garden to larger features.

Ideal for fountains. water features and hydroponics.

Advantages:

- Durable construction
- Features flow control adjuster
- Energy efficient
- Optional in-line use (For models PM700P and above only)
- Easy installation
- PM250P PM550P comes with 3m cable
- PM700P PM8500P comes with 10m cable
- Suitable for salt water applications
- Each unit individually wet-tested to guarantee reliable operation

Construction:

- Wear-resistant ceramic shaft ensures long life
- More powerful and energy-efficient magnetic rotor
- Weather-proof transformer
- Thermal protector
- Encapsulated epoxy resin motor ensures safety, reliability and durability

Powerful asynchronous water pumps designed to move more water, more efficiently. With strong flow and pumping capacity the patented DWP Series are ideal for large waterfalls, general water circulation and operation of filtration systems.

Advantages:

- Durable construction
- Patented design
- Unique design for multi-way installation and free positioning
- Optional in-line use
- Comes with 10m cable
- Suitable for salt water applications
- Each unit individually wet-tested to guarantee reliable operation

Construction:

- Vortex impeller rotating in one direction for energy efficiency
- Anti-corrosive and wear-resistant ceramic shaft ensures long life
- More powerful and energy-efficient magnetic rotor
- In-built thermostat and fully sealed motor for working reliability and safety
- Encapsulated and epoxy resin motor ensures safety, reliability and durability

Waterfall Pumps

Advantages:

- Large prefilter cover results in longer operating life
- Easy to carry handle
- Vertical or horizontal positioning
- Excellent filtration capability
- Strong pump capacity
- Comes with 10m cable
- Suitable for salt water applications
- Each unit individually wet-tested to guarantee reliable operation

Construction:

- Anti-corrosive and wear-resistant ceramic shaft ensures long life
- More powerful and energy-efficient magnetic rotor
- In-built thermostat and fully sealed motor for working reliability and safety

KEVIN'S HANDY HINT

Pumps for Waterfalls

Try simulating a flow of water over your waterfall with a garden hose, with someone adjusting the tap until the desired effect is achieved. Next, use a 10L bucket and reading a watch with a second hand, transfer the hose into the bucket and time how long it takes to fill the bucket without adjusting the tap.

Divide the size of the bucket (L) by the time (secs) taken to fill the bucket. Multiply the number by 60 to get litres per minute.

Next you need to measure the height of the waterfall above the pond water. Should your customer require a fountain spray, add 15-20 L/min to the result you obtained above.

Allowances must also be made for filters if the pond is to hold fish.

Bio-Filtration

Pressurised Pond Filters

PF Series

The pressurised EPF Series features an innovative back wash system for suck-in waste automatic removal. Experience cleaner water with PondMate pond filters.

Advantages:

- Easy operation
- Viewable pressure-alarm indicator for regular back washing cleaning & maintenance
- Innovative backwash system
- Optional UV clarifier with superior shatterproof quartz sleeve for better filtration performance
- Each unit individually wet-tested to guarantee reliable operation

Construction:

 Multi-layers of mechanical and biological filtration system containing 60 bio-balls and three layers of bio and filter sponge for removing harmful debris and breeding beneficial bacteria

UV Lamp also available as spare part.

| Model | UV Lamp Power | Capacity | Pond Max Flow | Dimensions Inlet/ Outlet (m) | | | Recommended Pump Qmax | Dimensions |
|---------------------------|------------------|----------|------------------|---------------------------------|-------------|--------------|--------------------------|-------------|
| | (W) | (L) | (L) | Inlet Tube | Outlet Tube | Waste Outlet | (L/hr) | (mm) |
| PM13500PF | - | 30 | 13500 | 25 32 | 25 32 | 40 | 18000 | 435x370x642 |
| PM13500PUF (UV Option) | 11 | 30 | 13500 | 25 32 | 25 32 | 40 | 18000 | 435x370x642 |

Canister Filters

EF Series

The ÉF Canister Filters are highly reliable and powerful filtering pumps. They offer good performance, lower power consumption and quiet operation.

Advantages:

- Powerful and adjustable flow rate
- Compact, simple installation and leak proof design
- Removable inlet/outlet combo for easy cleaning
- Inlet size is much bigger than outlet size for thorough filtration
- Mechanical, chemical and biological filtration process for maximizing water purification while reproducing beneficial nitrobacteria
- A unique button designed to eliminate manual siphoning and to provide quick start convenience
- Each unit individually wet-tested to guarantee reliable operation

Construction:

Innovative structure of UV lamp, optional for extra sterilizing

Note: Suitable for indoor use only.

| Model | UV Lamp Power | Power | Dimensions In | let/Outlet (m) | Q Max | Dimensions |
|--------------------------|------------------|-------|---------------|----------------|--------|-------------|

KEVIN'S HANDY HINT

Why You Need Filtration...

A biological filter is the most common way of keeping a fish pond clean and healthy for your fish. Ponds without filters are usually green and not pleasing to the eye. It is possible to create a clear pond with the use of water plants which add oxygen to the water. However, most pond owners find this system unsuccessful and have problems with plants removing oxygen from the water during night time hours. A biological filter is the way to solve the green water problem.

PondMate UV clarifiers effectively prevent the growth of algae and are suitable for both indoor and outdoor use in aquariums and ponds.

The patented, innovative design prevents the glass tube from being damaged by moving debris.

Advantages:

- Innovative spiral design allows the water staying longer time inside the unit to kill the bacteria more thoroughly
- Patented immediately-shown indicator light for confirming in-process working
- Designed and produced according to high safety standard
- Each unit individually wet-tested to guarantee reliable operation

Construction:

- Patented design effectively prevents glass tube from being damaged by any possible incoming dirt with the water flow
- Safe and reliable with saftey approved external ballast and critical components

| Model | UV Lamp Power | Recommended Pump Qmax | Recommended Pond/ Aquarium Size | Outlet Diameter | Ballast Type |
|-----------------|------------------|--------------------------|---------------------------------------|-----------------|---|
| 220~240V (50Hz) | (W) | (L/hr) | (L) | (mm) | |
| PM07UV | 7 | 2200 | 550~730 | 20 | Safety approved mechanical ballast with 1.8m input cord |
| PM13UV | 11 | 2850 | 720~960 | 20/25/32 | Safety approved mechanical ballast with 1.8m input cord |
| PM18UV | 18 | 3100 | 780~1050 | 25/32 | Safety approved mechanical ballast with 1.8m input cord |
| PM36UV | 36 | 5000 | 1300~1800 | 25/32 | Safety approved mechanical ballast with 1.8m input cord |
| PM55UV | 55 | 6000 | 1800~2500 | 25/32 | Safety approved mechanical ballast with 1.8m input cord |

Pond Accessories

Water Garden Lights LED Series

Advantages:

- Long lasting
- Energy saving
- Low maintenance

| Model | Description |
|-----------|---|
| PMLED1 | Water garden light. 1W, underwater use only. Transformer included. |
| PMLEDTRIO | Water garden lights - set of 3. 1W x 3, underwater use only. Transformer included. |

PMLED1

PMLEDTRIO

PMLIGHTRM31

Features:

- Low voltage for safety and energy savings
- Fully sealed with epoxy ensuring safe operation
- Fully submersible
- Angle of the LED light is adjustable
- Light sensor to turn unit on at night and turn it off in daytime automatically
- Comes with solid stand spikes for easy installation
- 5m power cable
- High quality heat resistant glass cover for durability

| Model | Description |

KEVIN'S GUIDE TO CHOOSING A POND PUMP

1. Is the pond in full sun or in the shade?

If the pond is in a sunnier area, it will generally be better for plant growth, but less so for certain fish.

Sunnier areas will generally require more filtration to prevent the water turning green.

2. What size pond pump will you need?

Divide the capacity of your pond (L) by 2 to obtain the average flow required in litres per hour. Then divide the result by 60 to find the average flow in litres per minute.*

E.g. A 6000L pond will require 3000 L/hr flow (50 L/min).

*Note this is only to be used as a guide. Other factors such as the amount of fish/plants in your pond will affect the result.

If the pump is <u>too large</u> for the pond, it will be noisy, slow down the rate of plant growth and aerate the water excessively. It will also be detrimental to any fish living in the pond. On the other hand, if the pump is <u>too small</u> for the pond, then there will be patches of stale water, leading to algae growth, bad smells and will not provide enough oxygen for fish.

3. Which of the following best suits your pond?

a) Heavily planted with little or no fish

Will not need as large a flow - Divide total capacity of your pond by **2.5** to obtain average flow required. *E.g. 6000L pond will require 2400 L/hr (40 L/min).*

b) Even mix of plants and fish

Will require a standard level of flow - Divide total capacity of your pond by **2** to obtain aver average flow required. *E.g. 6000L pond will require 3000 L/hr (50 L/min).*

c) Little or no plants with plenty of fish

Will require a higher flow rate - Divide total capacity of your pond by **1.5** to obtain average flow required.

E.g. 6000L pond will require 4000 L/hr (67 L/min).

4. Do you want to have a water feature/fountain or waterfall?

Waterfall or fountain applications will generally require higher head and flow rate. Therefore, the typical circulation pond pump may not be suitable. A different model may be required. *E.g. Fountain Pump (FP Series) or Waterfall Pump (WF Series).*

5. Will the pump be submerged in the pond or kept above ground?

All PondMate pumps can be submerged in the pond or installed above ground.

6. Do you want a 240V or low voltage pump?

Low voltage pond pumps are most often used where 240V mains power is a distance away from the pond.

7. How energy efficient is the pump?

A pump with lower power consumption will be most energy efficient at a given flow rate. Compare the power of the pump at its maximum flow (in W).

8. What about filtration?

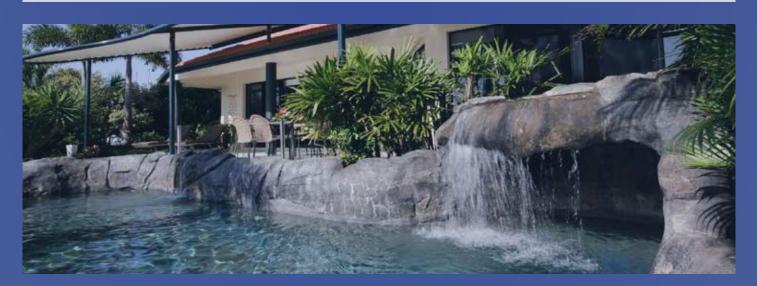

Don't forget that if a pond is to hold fish, a gravity or pressurised filter will be required. Therefore, allowances must be made for the filter's required flow rate.

Filtration also prevents the pond water from turning green.

An optimal system should contain both biological and UV filter to maximise the management of the water system.

9. What about Water Garden Lighting?

PondMate has an extensive range of both water garden lights to enhance your pond. For a energy efficient alternative, have a look at our LED light range.
